Abstract (en)
[origin: EP3714709A1] The present disclosure provides an aerosol delivery device having a chamber airflow path through a vaporising chamber housing a vaporiser. The chamber airflow path extends through at least one aperture defined by an upstream edge of a transverse baffle mounted downstream from the vaporiser. The chamber airflow path through the at least one aperture has a transverse cross-sectional area that is substantially equal or less than a minimum transverse cross-sectional area of the chamber airflow path downstream from the at least one aperture.
