Abstract (en)

[origin: WO2020193465A1] The invention relates to an improved external head apparatus for reducing the tone of masticatory muscles in patients with bruxism and/or other craniomandibular dysfunctions (CMD), comprising two curved, spring-hardened wires and two separate connection elements, wherein the external head apparatus has a plane of symmetry which extends through the center point of the curved, spring-hardened wires, and wherein the two separate connection elements lie on different sides of the plane of symmetry.
