Abstract (en)

[origin: WO2020193556A1] The invention relates to a woodworking machine, in particular a panel saw, and a method for controlling a woodworking machine. The invention relates in particular to a woodworking machine, in particular a panel saw, comprising a workpiece table having a substantially horizontal workpiece support surface and a saw slit, a saw assembly having a circular saw blade, which is arranged so as to be able to protrude out of the saw slit and defines a substantially horizontal saw line, a workpiece stop, movably arranged above the workpiece support surface and having a vertically upright workpiece stop surface, which is arranged such that a side edge of a plate-like workpiece, lying on the workpiece support surface in a support region arranged horizontally in front of the workpiece stop, can be laid on the workpiece stop surface, a sensor device, characterized in that the sensor device is designed to generate a sensor signal, wherein the sensor signal characterizes a cut end.
