Abstract (en)

[origin: WO2020161319A1] The invention relates to a guide roller (3) for guiding a material web (4) through components of a printing machine, which guide roller is rotatable in a direction of rotation about its main axis (13) and which comprises at least one groove (15) and at least one web (16). At least some regions of the web comprise local recesses (18) which are adjacent to plateau areas, the plateau areas having a greater radial distance from the main axis than the local recesses.
