Abstract (en)
[origin: WO2020194335A1] The present subject matter provides a synchronized braking system (200) for a vehicle (100). A foot-operated brake lever (205) capable of synchronously transmitting brake actuating forces to both rear wheel brake (135) and front wheel brake (130) is movably pivoted to a moving-pivot member (210) about a first-pivot axis (F-F) to actuate any one brake. The moving-pivot member (210) operatively connected to a second actuating member (220) capable of actuating any other brake. The second actuating member (220) is actuated by pivotal reaction of the foot-operated brake lever (205) pivoted to the moving-pivot member (210). A secondary stopper (235) capable of restricting a pivotal movement of the moving-pivot member (210) beyond a pre-determined degree of rotation.
