Abstract (en)
[origin: WO2020193596A1] The present invention concerns a rack for storage and/or transport of elements, in particular glazing elements, of the type comprising a receiving structure for these elements, the upper part of the structure comprising receiving means (18) and holding means (22, 23) for an additional upper rack that it is desired to stack thereon, and the lower part of this structure comprising complementary means capable of allowing it to cooperate with the receiving means (18) and the holding means (22, 23) of an additional lower rack on which it is desired to stack it. This rack is characterised in that the holding means comprise at least two members (22, 23) spaced apart from each other in the transverse direction by a value of a step corresponding to a difference in dimensions, in the transverse direction, of the racks that it is desired to stack.
