Abstract (en)
[origin: WO2020193645A1] The present invention concerns a rack for storing and/or transporting items, in particular glazing items, comprising a structure (3) provided with receiving means capable of receiving and holding these items and front protection means. This rack is characterised in that the protection means are capable of assuming two positions, i.e. a deployed position in which they prevent access into the rack and a retracted position in which they allow unhindered access to the latter.
