Abstract (en)
[origin: WO2020193048A1] The invention relates to a clutch device (10) for coupling and decoupling a first shaft (24) and a second shaft (28). The clutch device (10) comprises a clutch body (12) which runs through an axial movement path (52). Said axial movement path (52) is delimited by way of a first end position stop (48) and a second end position stop (50). The clutch body (12) is received fixedly on one of the two shafts (24, 28) so as to rotate with it and, on the shell surface (14) thereof, comprises a first circumferential groove (16) with a first slope (18) and a second circumferential groove (20) with a second slope which runs in an opposed manner with respect to the first slope (18).
