Abstract (en)  
[origin: WO2020201308A1] The invention relates to a device (1) for the internal actuation of a gearbox, comprising a main axle (1) mounted such that it can slide through a housing (3, 4), and having a transverse extension (2) capable of acting on an intermediate arm (14) which is designed to conduct a gearshift fork (8), wherein the intermediate longitudinal member (14) is mounted translationally with respect to the housing (3, 4).
