Abstract (en)
[origin: WO2020201662A1] The present invention concerns a method for enriching data, comprising: a) receiving (S1) a plurality of datasets each comprising a fundamental datum and metadata, b) grouping (S3) the datasets according to fundamental data according to a similarity function (F), c) enriching (S4) each dataset with a label characterising the group to which the dataset belongs, d) searching (S5) for each enriched dataset, in a database (DB1, DB2) storing datasets each comprising metadata and a label, for a combination of at least a part of the metadata and the label of the enriched dataset, and e) if the combination of at least a part of the metadata and the label of the enriched dataset is missing from the database, removing (S6) the label from the enriched dataset.
