Abstract (en)

[origin: WO2020193773A1] A method for negotiating a contract between two parties in a telecommunications network and devices implementing said method. This contract negotiation method comprises: - distributing, by a first party (A), a smart contract (SCGA) comprising: - a subscription method (SUBS_SCGA) allowing a second party to distribute a transaction (TR_AB) for subscribing to the contract proposal; - a method (GEN_CTRT_SPEC) for generating a personalised contract (SCAB) between the parties and requesting their registration in the chain of blocks (CB), the personalised contract (SCAB) being generated on the basis of parameters included in said transaction (TR_AB); - a step (B70) of executing said subscription method (SUBS_SCGA) by a terminal (TB) of said second party, said execution triggering the distribution (B80) of a transaction (TR_AB) comprising parameters representing the acceptance of the contract proposal by the second party; - a step (U90) of executing, by a prospecting device (Ui), said method (GEN_CTRT_SPEC) for generating a personalised contract with these parameters.
