Abstract (en)

[origin: WO2020192914A1] The invention relates to a closure element, having a tension element that is tensioned in the closed state, wherein the tensioned state thereof can be detected contactlessly via a sensor. The invention also relates to a seal comprising a closure element of this type, in particular an electronic seal. The invention further relates to, inter alia, a method for monitoring the tensioned state of the tension element and a method for monitoring a seal.
