Abstract (en)
[origin: WO20200937A1] The invention relates to a conductor connection terminal comprising the following: a) a housing made from insulating material, having a conductor insertion opening for inserting an electrical conductor and a contact element insertion opening for inserting a contact element; b) a busbar, which has a terminal section arranged between the electrical line inserted and the contact element inserted; c) a first clamping spring for clamping the electrical conductor, which clamping spring has a first clamping leg with a clamping edge directed towards the terminal section, a first leaf spring and a first bearing leg, wherein the clamping edge and the terminal section form a first terminal point for clamping the electrical conductor.
