Abstract (en)

[origin: WO2020197481A1] A method, system and node are disclosed. In one or more embodiments, a network node configured to communicate with a wireless device is provided. The network node is configured to, and/or comprising a radio interface and/or comprising processing circuitry configured to configure (S134) at least one timeslot of a first 5radio access technology, RAT, to remain unused in a frame, and schedule (S136) at least one signaling and synchronization block, SSB, of a second RAT for time division multiplexing, TDM, based at least in part on the unused at least one timeslot of the first RAT.
