Abstract (en)

A method for manufacturing a carbon heat source for a flavor inhalation tool, said method comprising: forming composite particles, which have an average particle diameter D50 of 10-150 µm and a half-value width of 10-150 µm, with the use of, as a starting material, a slurry containing carbon particles, calcium carbonate particles, a binder and water; molding a mixture containing the composite particles and water to give a molded article; and drying the molded article.
