Abstract (en)
[origin: EP3949767A1] Channels 301 (channels 301A to 301D) for an aerosol stream passing from an inlet edge 300A to an outlet edge 300B is provided to a support member 300 of an aroma cartridge. Moreover, a mixing space 302 for mixing aerosol stream passing to the support member 300 from an aroma-generating source to be heated 110 shown in FIG. 1 and FIG. 2(A) is provided at an inlet edge of the channels 301 of the support member 300. The mixing space 302 unifies a flow amount and a flow rate of the aerosol passing from the aroma-generating source to be heated 110 to the support member 300, caused by the kind and the charged amount of the base member 110A of the aroma-generating source to be heated 110, and allows a user to readily breathe the aroma components released from the aroma-generating source to be heated 110. The utilization of information in an ID chip realizes stabilization of the aerosol stream, stable support of the aroma-generating base substrate to be heated when inserting a heating element, and improvement of easy operation when inserting the cartridge.
