Abstract (en)

Mould container part (2), comprising: one or more than one mould cavity (7) comprising a bottom (13) and one or more than one side wall (19); wherein at least a part of the bottom (13) comprises one or more than one sliding plate (20) that is slidable in a plane defined by said bottom (13) and that comprises one or more than one opening (21) to define an aerator (22) that is configured to allow introduction of air between the bottom (13) of the mould cavity (7) and the green brick (3) formed in the mould cavity (7) in a demoulding state, wherein the sliding plate (20) is slidable between a filling state wherein the one or more than one opening (21) is concealed from the mould cavity (7) and the demoulding state wherein the one or more than one opening (21) is moved sideward and exposed in the mould cavity (7) to thereby selectively allow introduction of air between the bottom (13) of the mould cavity (7) and the green brick (3). The invention further relates to mould container press device, comprising such a mould container part (2).
