Abstract (en)  
[origin: EP3950474A1] Provided is a saddle ride type vehicle including a movable windscreen structure capable of improving operability at low cost. A shaft 67 is supported by a fixing member 53 so as to be vertically movable, the shaft 67 passes through a lower upright portion 56d of a screen attachment member 56 provided on the outer side in the vehicle width direction of the fixing member 53, and an operation unit 58 is slidably provided at the end portion of the shaft 67. The operation unit 58 includes a grip portion 58e gripped when being slid and a flange portion 58h disposed inside in the vehicle width direction of the grip portion 58e, the grip portion 58e includes an outer grip portion 58f disposed outside in the vehicle width direction and an inner grip portion 58g disposed inside in the vehicle width direction of the outer grip portion 58f, and the flange portion 58h is formed to have a larger diameter than the inner grip portion 58g.
