Abstract (en)  
A household thin paper storing container 1 is provided with a container body 10 having a storing space S in which a household thin paper P is stored. The container body 10 is provided with a container body upper part 11, a container body lower part 12, and a connection part 13 that connects a rear surface of the container body upper part 11 and a rear surface of the container body lower part 12 to each other. By turning the container body upper part 11 with the connection part 13 as a fulcrum, the container body 10 closes or exposes the storing space S of the container body lower part 12. The container body upper part 11 is provided with a handle part 119 that protrudes from a front surface and has a gap a between the handle part 119 and the front surface. A portion at which an inner surface of the handle part 119 and an outer surface of the container body upper part 11 cross each other is formed in an R-shape.
