Abstract (en)

[origin: EP3951041A1] A clothing treatment apparatus, a control method, a control system (700, 800), and a readable storage medium (702). The control method for a clothing treatment apparatus comprises: controlling the clothing treatment apparatus to allow water to enter therein, and acquiring a water level of an outer cylinder of the clothing treatment apparatus; and upon determining that the water level has reached a first water level, controlling the clothing treatment apparatus to enter a main washing stage in which beat washing and a cylinder rotation washing are performed alternately, wherein the main washing stage comprises a first beat washing process and a second beat washing process, and a motor of the clothing treatment apparatus is controlled to perform the first beat washing process at a first washing tempo, and to perform the second beat washing process at a second washing tempo, the first washing tempo being different from the second washing tempo. The invention performs multiple beat washing and high-speed cylinder rotation washing alternately, thereby effectively improving washing efficiency and a washing effect. In addition, washing water does not need to be heated during the whole washing process, thereby avoiding damage to clothing caused by high temperature, and reducing energy consumption.
