Abstract (en)
[origin: EP3952221A1] Means is to be established for appropriately performing system recognition on devices connected to an identical system without recognizing a device of a different system as a device of the identical system in high-frequency communication. In a device network system, an outdoor unit (101) selected from among all outdoor units (101, 102, 103) of a first network (10) performs a recognition process on the outdoor units (102, 103) and indoor units (104, 105, 106) of the first network (10). In the first network (10), communication between individual devices including the outdoor units (101, 102, 103) and the indoor units (104, 105, 106) is performed by using a high frequency, and the recognition process performed by the selected outdoor unit (101) uses a recognition signal having a low frequency.
