Abstract (en)
[origin: WO202227782A1] Reconfigurable children's furniture has a supportive framework comprising a pair of side A-frames cooperating to support a foldable base beneath vertical midpoints of the A-frames. The base has a pair of baseboards configured for folding between a daybed configuration wherein the baseboards each are adjacently horizontal thereby forming a bed surface therebetween and a stowed configuration. Supports are each connected between a respective outer corner of a respective baseboard and an upper edge of a net and each support is extendable. In the stowed configuration, each support is contracted and lies against a respective baseboard. In the daybed configuration, each support is extended and stands perpendicularly with respect to the respective baseboard.
