Abstract (en)
[origin: WO2020207831A1] The invention relates to a dispenser for a pressurised container. The dispenser is provided with an outlet pipe which opens into a nozzle housing designed to receive and retain a nozzle (40) provided with a retaining ring (43). The nozzle housing comprises a tubular wall (34) which is open to the outside at the end situated opposite the outlet pipe. According to the invention, at a distance from the end open to the outside the tubular wall (34) is provided with a bearing surface (341) which extends over at least a portion of the periphery of said tubular wall and behind which at least a portion of the retaining ring (43) of a nozzle inserted into the nozzle housing can be engaged.
