Abstract (en)

[origin: WO2020244871A1] The invention relates to a rail motor unit for passenger transportation, having two end cars (1) and at least one carriage (2), which are each equipped with bogies at the ends, and car junction modules (3) which do not have bogies and whose number exceeds that of the carriages (2) by one and which are arranged either directly between an end car (1) and a carriage (2) or directly between two carriages (2), wherein in each case each car junction module (3) is coupled with respect to its rolling movement exclusively to at least one directly adjacent carriage (2) by means of an anti-rolling support device (4).
