Abstract (en)

[origin: WO2020207760A1] The present invention relates to a packaging (1) for housing a plurality of articles comprising an outer packaging (2) and an inner packaging (3), wherein the inner packaging is moveable in a longitudinal direction in relation to the outer packaging. The outer packaging, made of a first packaging material, is at least partially housing the inner packaging. The inner packaging for housing the articles is made of a second packaging material. In a closed state of the packaging before the first opening thereof the inner packaging is fixedly attached via a first connection to an inner surface of the outer packaging lid. At least one face of the outer packaging lid comprises a deformable section (6) such that the first opening of the packaging requires a pressure to be applied upon said deformable section so as to break said first connection between the inner packaging and the inner surface of the outer packaging lid. After breaking the first connection, the inner packaging is arranged to be moveable in a longitudinal direction in relation to the outer packaging.
