Abstract (en)
[origin: WO2020207686A1] The invention relates to a tamping pick (11) for a tamping machine (1) for tamping a track (3), said tamping pick comprising a pick shaft (14) which has a holding section (15) at its upper end for fastening in a pick receptacle (12) and which merges at its lower end into a pick plate (16). A sensing element (22) of a sensor (23) is located in a recess (21) of the pick shaft (14) and the tamping pick (11) comprises a coupling element (24) for transmitting a sensor signal. In this manner, the tamping pick (11) fulfills a sensor function in order to detect measurement variables occurring in the tamping pick (11).
