Abstract (en)

[origin: WO2021254878A1] The invention relates to a locking device (1) for locking two components, more particularly two panels (10) of a cooling chamber, having a locking housing (7) which can be encapsulated, particularly encapsulated in foam, and in which a locking element is arranged, wherein at least one venting channel (4) extending through the locking housing (7) is provided for carrying off gaseous media. The invention also relates to a component having a locking device (1) and a method for fastening a locking device (1) in a component.
