Abstract (en)

[origin: WO2020207617A1] The invention relates to a method for drying building material slabs, in particular cement-containing slabs, which are guided in levels (15) through a device divided into a drying pre-zone (2) and drying chambers, wherein the slabs are brought into contact with drying air. The invention is characterized in that drying air from the drying pre-zone (2) is applied to the slabs in a region (1) which is arranged upstream of the pre-zone (2) and which is enclosed at least on both longitudinal sides, with respect to the conveying direction of the slabs, and on the upper face.
