Abstract (en)

[origin: WO2020229149A1] The invention relates to a method for controlling at least one actuator system (50), wherein the at least one actuator system (50) is controlled on the basis of an object position (4) of an object (40), wherein the object position (4) is provided by an object tracking function (30), and wherein the object tracking function (30) is provided with digital geometry data (5) of an object (40) to be tracked and detected sensor data (6) from at least one sensor (51) detecting the object (40) in the form of input data. The invention also relates to a device (1).
