Abstract (en)  
[origin: WO2020212188A1] The invention relates to a cleaning machine comprising a cleaning head (52), a holding rod device (100), and a joint device (96) by means of which the holding rod device (100) is pivotably articulated on the cleaning head (52). A connecting element (120) is arranged on the holding rod device (100), which connecting element has a first region (126) and a second region (128), wherein the second region (128) is spaced apart from the first region (126) in a transverse direction (129) and the transverse direction (129) is oriented transversely to a longitudinal axis of the holding rod device (100), wherein the connecting element (120) is connected via the second region (128) to a joint (102) of the joint device (96), which joint is associated with a pivot axis (104), wherein in particular the joint is a first joint (102) of the joint device (96) and has a first pivot axis (104), and wherein the connecting element (120) is connected via the first region (126) to the holding rod device (100).
