Abstract (en)

[origin: WO2020212269A1] The invention relates to a system for the recovery of a surface marine craft (4) by a carrier ship (1). The system comprises a lifting device with which the carrier ship (1) is intended to be equipped and which comprises a lifting means of the davit type (5), equipped with a lifting cable (7) comprising, at one end, a connection interface, a pole (9) bearing a guide cable (10), an anchor (11) connected to one end of the guide cable (10), the connection interface for the lifting cable (7) being coupled removably to the anchor (11), and a hauling cable (12). The system also comprises a receiving device with which the marine craft (4) is intended to be equipped, the receiving device comprising a forward module (13), intended to be fitted to the bow of the marine craft (4) and configured to receive the guide cable (10) and the lifting cable (7) and comprising a receiving housing able to receive the anchor (11), the fixing of the anchor (11) forward module (13) bringing about the fixing of the connection interface for the lifting cable (7) to a handle connected removably to the forward module (13), and a lifting support configured to accept and immobilize the handle (21).
