Abstract (en)
[origin: WO2020212426A1] The invention relates to a closure cap (11) for closing the pouring opening (33) of a container, said cap having a cylindrical threaded part (15) with an open rim (25) and an inner thread (27) which can co-operate with an outer thread (31) of a container neck (29) of the container (13), a security ring (17) which is designed to be held on a projection (35) formed on the container neck (29), a plurality of security webs (63) which can releasably connect the security ring (17) to the open rim (25), and a first retaining strip (19a) having a first and a second end (39, 41), the first end (39) being securely connected to the open rim (25) of the threaded part (15) and the second end (41) being securely connected to the security ring (17). The closure cap comprises a second retaining strip (19b) having a third and a fourth end (51, 53), the third end (51) being securely connected to the open rim (25) of the threaded part (15) and the fourth end (53) being securely connected to the security ring (17). A circular web section (69) of the security ring (17) is formed between the first and the second ends (39, 51). A second projection (71) is formed on the outer wall of the web section (69).
