Abstract (en)

[origin: WO2020212260A1] The present invention relates to a filter device for a vapour extraction device (11) having a suction opening (111) via which air is sucked off downwards. The filter device (2) is characterized in that the filter device (2) has a grease filter (20) and a collecting container (21) for collecting liquid, with an opening (210) for receiving at least part of an edge of the grease filter (20), and the width of the interior of the collecting container (21) is greater than the thickness (D) of the grease filter (20) in the region in which the latter is located in the interior of the collecting container (21). In addition, a vapour extraction device (11) having such a filter device (2) is disclosed.
