Abstract (en)

[origin: WO2020165176A1] The invention concerns a device for the holographic and hyperspectral measurement and analysis (2) of a sample (3), comprising; - an acquisition means (2) for acquiring a diffracted image (11) of an image of the sample (3); and interference patterns (12) of a reference light signal (R) and the light signal (O) having passed through the sample (3) to be measured and analysed; and - a means for illuminating the sample (3) focused on the sample (3); and - a means for reconstructing and analysing (1) the hyperspectral holographic image comprising a deep convolutional neural network generating an image for analysis and detection of particularities in the sample.
