Abstract (en)  
[origin: WO2020212523A1] The invention relates to a system (20) and to a method for the simulation of industrial processes. It is intended that a system (20) for the simulation of industrial processes is provided. The presented system is designed to carry out a simulation of industrial processes by means of system-inherent components in such a manner that actions and in particular effects can be directly implemented in reality in a traceable and automated manner by means of information systems coupled to the system (20). In parallel, interactions can be represented by means of system-inherent Augmented Reality / Virtual Reality components and/or Mixed Reality components. A corresponding method is also disclosed.
