Abstract (en)

[origin: WO2020239409A1] The invention relates to a component (1) and a device (10) for unidirectional data transmission, as well as a system (100) for the monitoring and diagnosis of a control network (200) for operating rail vehicles (201) and/or signals boxes (202). The component (1) comprises a transmitter unit (2) for wirelessly transmitting a data signal (S) with a frequency lower than 300 GHz and a receiver unit (3) for wirelessly receiving the data signal (S), wherein the transmitter unit (2) and the receiver unit (3) are each integrated into the component (1) and are arranged at a distance (d) of less than 10 mm from one another.
