Abstract (en)

[origin: WO202216631A1] The present invention relates to a vacuum cleaning device having a separating device for separating dirt particles from an air flow sucked in by the vacuum cleaning device, the separating device comprising at least one first separator and one second separator and, in a base collecting container of the vacuum cleaning device, different regions of the base collecting container can be separated from one another by a partition. In a second aspect, the invention relates to a method for replacing a disposal bag in a vacuum cleaning device.
