Abstract (en)
[origin: WO2021013585A1] The invention relates to a train carriage (11) comprising a passenger compartment (12), wherein the passenger compartment is designed for conveying passengers. Instead of windows, an interior wall of monitors (13a) is arranged inside the passenger compartment (12). Exterior cameras (17b) are arranged on the train carriage (11), which generate live images of the external surroundings of the passenger compartment (12) and transmit them to the interior wall of monitors (13a). This means that the interior wall of monitors (13a) functions as windows for a passenger in the passenger compartment (12) inside the train carriage (11).
