Abstract (en)
[origin: WO2020216750A1] Box (1) including a base (2) and a peripheral rim (3), the peripheral rim (3) comprising four panels divided into a first pair (31) and a second pair (32) that are mutually perpendicular, each panel of the second pair (32) being connected in an articulated manner to each panel of the first pair (31), each panel of the first pair (31) being able to be folded over on itself about at least one hinge (33) extending from a lower corner of the panel, the hinge (33) being designed to allow the panel to be folded into a storage position, the first part (31a) of the panels of the first pair (31) and the second part (31b) of these panels of the first pair (31) each having respectively first retention means (34) and second retention means (35) that are included in the thickness of the panels.
