Abstract (en)

[origin: WO2020216721A1] The invention relates to a reclosable package, comprising a cavity for storing products arranged within a container, surrounding the cavity, the container extending along a longitudinal direction and having a back side and a front side joined to each other at longitudinal sides parallel to the longitudinal direction and further having an upper side and a bottom side, both extending along intersecting directions to said longitudinal direction, wherein a zipper is arranged at one of either the upper side or the bottom side of the container, the zipper reversibly connecting two closure parts of the container, wherein respective end portions of the two closure parts of the container are sealed to each other as a sealed closure, the sealed closure being folded flat and attached to either the front side or the back side of the container before the first opening of the reclosable package, wherein, before said first opening of the reclosable package, a tear-off strip is arranged between the zipper and the sealed closure, the tear-off strip connecting unsealed first and second portions of each of the two closure parts of the container.
