Abstract (en)
[origin: WO2020216517A1] The present invention relates to a device and a method for adjusting at least one flexible bend (27) concentrically with respect to a rotatably mounted clothed drum (4) of a carding machine, wherein at least one flexible bend (27) for guiding a plurality of revolving card-flat bars (14) of a revolving flat system (17) either side of the drum (4) is in each case adjustably arranged directly or indirectly on a respective side shield (16) by means of a plurality of adjustment points, wherein a means is provided by means of which at least one point of contact can be established between the card clothing (14a) of the card-flat bar (14) and the card clothing (4a) of the drum (4), such that the flexible bend (27) can be adjusted concentrically with respect to the drum (4).
