Abstract (en)

[origin: WO2020216720A1] The invention relates to a method for managing a communication between a base station and a terminal. According to the invention, the terminal being associated with at least one memory comprising at least two storage zones, the terminal implements: at least one step of storing (21), in one of the storage zones, a state representative of a transmission, by the base station, of at least one current data packet and control information related to the current data packet, referred to as a current transmission, the storage zone being identified by a storage zone indicator supported by the control information associated with the current data packet, the transmission (22) to the base station of all the states stored in the storage zones, when the terminal is authorized to transmit.
