Abstract (en)

A method of determining the force variation on a green tire (64) using a roller assembly (20) comprising a pressure roller (22) is disclosed. The method comprises the steps of: forming a green tire (64) having a tread and belt assembly, stitching the outer surface of the tread using the pressure roller (22), and measuring the radial force by a sensor (26) mounted in the roller assembly (20). Also, an apparatus for building tires is disclosed. The apparatus comprises a tire building drum (14) and a stitching device (20), wherein the stitching device (20) comprises a pressure roller (22) rotatably mounted in a first and second bearing (24) located on each end of the pressure roller (22), and a first and second axle sensor (26), each axle sensor having a spindle (28) mounted within a respective bearing (24) for measuring forces on the pressure roller (22).
