Abstract (en)
The invention relates to a wooden pillar-beam structure equipped with glass elements. The pillar-beam structure comprises essentially vertical wooden pillars (10) belonging to a load-bearing structure (13) of a building (29) as well as glass elements (11) . In the pillar-beam structure, a glass element (11) is supported to a wooden pillar (10). The glass element (11) is attached by means of an adhesive connection (16). The invention also relates to a method for forming a wooden pillar-beam structure equipped with glass elements.
