Abstract (en)

[origin: WO2020225661A1] Disclosed is a glove intended especially for racket sports, allowing the almost total preservation of sensations when an object is being held. The glove is open up to the distal phalanges of the fingers in order to preserve maximum contact with a handle, and has gripping material on the fingertips in order to optimise the gripping of the handle and prevent the glove from slipping around the fingers. An elastic part surrounds the wrist, with anti-slip properties on the side next to the skin for better hold. A part covers the entire back of the hand with stretchable material adapted to the temperature, double-fibre material allowing moisture to be transferred outwards and then absorbed. Elastic is provided at the base of the palm (opening side), allowing the hand to close more easily around the handle. The glove is intended, in particular, for any person needing to cover only the back of the hand.
