Abstract (en)

[origin: WO2020225530A1] A food processing machine (10) and a method of cutting slices or portions from a food product (60) in a food processing machine are described. The food processing machine comprises an end gripper (40) for gripping a trailing end (62) of a food product travelling along a food product flow path towards the cutter. A gripper drive assembly (41) is arranged to move the end gripper from a stowed position below the food product flow path to a raised position in the food product flow path after a food product has passed over the end gripper and then bring the end gripper into engagement with the trailing end of the food product.
