Abstract (en)

[origin: WO202221974A1] A wishbone (TR) comprises a main component (PP) comprising a first end (E1) coupled to the hub of a wheel of a vehicle, a second end (E2) equipped with a first articulation (A1) coupled to the chassis of the vehicle, and a third end (E3) comprising a flattened fixing rod (TF) and to which there is coupled are second articulation (A2) housed with the ability to rotate in a recess (EA) of a coupling component (PC) securely attached to the chassis. This second articulation (A2) comprises a first passage (P1) having a cross section of a first non-circular shape, and into which there is push-fitted without the possibility of rotating a bushing (BA) equipped with a second passage (P2) that allows it to be push-fitted without the possibility of rotating onto the fixing rod (TF).
