Abstract (en)
[origin: WO202221519A1] The present invention relates to a container (1) for transporting and storing liquid, viscous or pourable substances, in particular a container of the Intermediate Bulk Container type, comprising a base (2), a side wall (4) and at least one outlet recess (6) in the base (2) and/or the side wall (4), in which an outlet valve (8) is or can be arranged and which is closable on the outside of the container by a cover (10). The cover (10) has a base section (12), by which the cover (10) is fastened or fastenable to the container (1), and a closure section (16) which is hinged on the base section (12) via a hinge assembly (14) such that it can pivot about a rotational axis (A). The hinge assembly is designed to hold or lock the closure section (16) in a self-supporting manner in a position releasing the outlet recess (6).
