Abstract (en)
[origin: WO2020224709A1] The invention relates to a lock (1) for a motor vehicle, said lock comprising: a locking mechanism (2) consisting of a rotary latch (3) and at least one pawl (4); a pulling shut device (9) having an electric drive (17), wherein the locking mechanism (2) can be transferred from a pre-locking position (VR) into a main locking position (HR) by means of the pulling shut device (9); and a control unit (S) for the pulling shut device (9), wherein a pulling shut operation can be controlled depending on a measurement value associated with the electric drive (17), and the pulling shut operation being controllable by means of a number of electric pulses (24, 25, 26) generated during the pulling shut operation.
