Abstract (en)
[origin: WO2020225607A1] A system and method for real time inventory monitoring and acquisition of substances is described. The system includes a monitoring device for monitoring a weight or volume of the substance, and an interconnected database and processing subsystem for calculating a volume, spillage, revenue, cost of consumption and remaining stock of the substance. The method includes storing calculation data related to a substance on a database, scanning or weighing a container holding the substance, and determining the volume, revenue, cost of consumption, loss of stock, and remaining stock of the substance.
